

Lawn Fertilizer Applications

In order to achieve a healthy lawn, a certain amount of nitrogen and other nutrients need to be applied over the growing season, without applying too much at one time. We use a slow-release, dry granular fertilizer with a suitable mix of nitrogen, phosphorus and potassium that provides nourishment to your lawn over an extended period of time.

Scheduling...

- Fertilization should begin when the soil temperature is warm enough in the Spring and continue until Fall when the soil temperatures start to drop again. Book this service before spring arrives so it can be scheduled as early as possible.

Before we arrive...

- Homeowners need to inform us if there are any pets before arrival and make proper arrangements. For example, dogs may need to be contained while the fertilizer is being applied.

What we do...

We offer fertilization programs that provide the following benefits to the homeowner:

- Applications are calculated to provide the proper amount of nutrients over the season
- No need to call & book each application - we automatically come and do each application at the appropriate time so that they are evenly distributed without you having to remember when you need to fertilize again. A tentative schedule (+/- 1 week) is provided for your reference.
- Fertilizer is applied using a finely regulated high quality spreader that allows us to distribute the ideal level of fertilizer evenly without excess waste or risk of burn-out
- After each application, we remove any excess fertilizer from sidewalks and driveways, and leave a small sign in your lawn so that you know fertilization has been completed

What's not included...

- Ideally, fertilizer is applied just before a rain (or even while it's raining lightly), but if that doesn't happen, it is recommended the homeowner waters their lawn within 24 hours after fertilization.

Fertilization Program LF2x

This program provides 2 fertilizer applications to your lawn per season and is sufficient in most cases to have a healthy and beautiful lawn.

Fertilization Program LF3x

This program provides 3 fertilizer applications to your lawn per season and is recommended if you desire a healthy and very lush lawn. With this number of fertilizer applications, your lawn will likely require mowing more often.
